# Mini-Map for M.EE.HS.N.CN.2.c 

LEARNING MAPS
Subject: Mathematics
Number and Quantity-The Complex Number System (N.CN) Grade: 9

## Learning Outcome

## DLM Essential Element

M.EE.HS.N.CN.2.c Solve real-world problems involving multiplication of decimals and whole numbers, using models when needed.

## Grade-Level Standard

M.N.CN.2.c Use the relation $i^{2}=-1$ and the commutative, associative, and distributive properties to add, subtract, and multiply complex numbers.

## Linkage Level Descriptions

| Initial Precursor | Distal Precursor | Proximal Precursor | Target | Successor |
| :--- | :--- | :--- | :--- | :--- |
| Recognize separateness <br> as objects that are not <br> joined together. | Recognize a unit as a <br> group of countable <br> objects. Recognize ten <br> as a group of 10 <br> individual objects or 1 <br> ten. Communicate <br> understanding that the <br> digit in the tens place is <br> formed by grouping <br> objects by 10s and the <br> digit in the ones place is <br> composed of individual <br> objects. | Multiply two rational <br> numbers, each with <br> digits up to the tenth <br> place and limiting the <br> product to answers <br> with tenths, ones, or <br> tens (e.g., multiplying <br> 2.5 by 4.0). | Solve word problems <br> involving multiplication <br> of rational numbers, <br> limiting the factors and <br> products to whole <br> numbers and decimals <br> to the hundredths. | Solve multi-step real- <br> world and <br> mathematical problems <br> involving multiplication <br> of rational numbers, <br> limiting the factors and <br> products to whole <br> numbers and decimals <br> to the hundredths (e.g., <br> Miguel earns $\$ 8.75$ <br> each day for 5 days. He <br> spends $\$ 18.80$ on a <br> game. How much |
| money does Miguel |  |  |  |  |
| have left?). |  |  |  |  |

## Initial Precursor and Distal Precursor Linkage Level Relationships to the Target

## How is the Initial Precursor related to the Target?

Solving multiplication problems with or without decimals requires a student to be able to recognize that two or more sets or groups of items exist. Work on this skill using a variety of sets. Help students recognize when items are grouped together into a set or separated out. The educator presents a set, labels it (e.g., two balls, one marker, three CDs), counts the items, labels it again, and encourages students to use numerals to label and count the separate sets.

## How is the Distal Precursor related to the Target?

As students' understanding of number develops, they will work with numbers greater than nine (two-digit numbers). Use tools to create tactual and visual models of tens and ones (e.g., tenframes, connecting cubes, bundling sticks). Educators will describe these numbers as __ groups of ten and $\qquad$ ones. (e.g., 13 is 1 group of ten and 3 ones).
