

Slide 1. Welcome to the Dynamic Learning Maps<sup>®</sup> (DLM<sup>®</sup>) District and Building Administrator Training.

Slide 2. The District and Building Administrator Training for the DLM alternate assessment provides district and building administrators with information about the DLM system, eligibility, assessment delivery, and monitoring resources for the assessment.

Slide 3. This presentation is an overview of the DLM Alternate Assessment System and is especially for district and building administrators. By the end of this presentation, you will have a greater understanding of this assessment system for your state. You will know the core beliefs behind the DLM alternate assessments, the assessment design, accessibility supports, assessment delivery, and the reports and resources available to you.

Slide 4. We will first discuss the core beliefs behind the DLM alternate assessment.

Slide 5. The DLM alternate assessment tests what students with the most significant cognitive disabilities know and can do in the DLM subject areas in grades 3-8 and high school. The DLM system provides accessibility by design and is guided by the core beliefs that all students should have access to challenging, grade-level content, and that test administrators should adhere to the highest levels of integrity in providing instruction and in administering assessments based on this challenging content.

Slide 6. As defined by the U.S. Department of Education, students with the most significant cognitive disabilities have one or multiple disabilities that affect intellectual functioning and adaptive behaviors. The DLM alternate assessment is designed for students for whom general education assessments, even with accessibility supports, are not appropriate.

Slide 7. Students taking the DLM alternate assessment often require extensive, direct instruction and substantial supports to achieve measurable gains. These students learn academic content aligned to grade-level content standards, but at reduced depth, breadth, and level of complexity.

Slide 8. Next, let's look at the design of the DLM alternate assessment.

Slide 9. DLM alternate assessments for science are available in grade bands: elementary, middle school, and high school. States choose the grade within each grade band to assess.

Slide 10. The DLM content standards are called Essential Elements and are the learning targets for the assessments. The purpose of the Essential Elements is to build a bridge from grade-level content standards to academic expectations for students with the most significant cognitive disabilities. Essential Elements are linked to grade-level standards in each state.

Slide 11. This is a sample of a DLM science blueprint for the elementary grade band. The blueprint lists the Essential Elements available for testing within each grade band. Science Essential Elements are organized into domains, core ideas, and topics. During the spring assessment window, all Essential Elements are assessed.

Slide 12. Linkage levels denote the level of complexity for each Essential Element. The system's assignment of the levels of complexity for a student is based on data the teacher enters in the system about the student. Each testlet is designed to assess a particular linkage level. As linkage levels progress, the skills the student is asked to demonstrate become more complex.

Slide 13. Science has a total of three linkage levels, including two levels that lead up to the Target.

Slide 14. DLM alternate assessments are made up of a series of short assessments called testlets. Each testlet begins with an engagement activity and combines 3–9 items to increase the instructional relevance of the assessment. This method provides a better estimate of the students' knowledge, skills, and understandings than can be achieved by a single assessment item. Each testlet assess a single Essential Element.

Slide 15. Following the engagement activity, the student receives 3-9 items. Single-select multiple choice is the only type of item currently used in DLM science testlets.

Slide 16. The DLM alternate assessment has two types of testlets: computer-delivered and teacher-administered.

Slide 17. Computer-delivered testlets are the more common testlet type and are administered directly to the student via computer. These testlets are designed to allow students to interact independently with the computer using assistive

technology as necessary. Computer-delivered testlets are more common at the upper linkage levels.

Slide 18. Teacher-administered testlets are delivered to the student outside of the Kite® system. The online content is for the test administrator, who sets up the assessment, delivers it, and then records the responses. Teacher-administered testlets are common at the Initial linkage level. Teacher-administered science testlets at the Initial level are often accompanied by picture response cards. Printing the picture response cards in color is best practice.

Slide 19. The DLM alternate assessment is designed to be delivered in a way that is accessible to students with the most significant cognitive disabilities.

Slide 20. Test administration is designed to be personalized for each student. The Personal Learning Profile is a term used to describe the settings that allow the test administrator to personalize the system for each student. Together, a student's First Contact survey and Personal Needs and Preferences (PNP) Profile settings provide each student with a customized testing experience.

Slide 21. Test administrators use the student's Personal Needs and Preferences Profile settings to select the appropriate accessibility supports within the system, such as magnification and spoken audio, to tailor each student's assessment experience based on the student's individual needs.

Test administrators use the First Contact survey to enter information about expressive and receptive communication skills, content-specific skills, and other important information about the student. Some questions from the First Contact survey are used to determine a student's entry point into the assessment by assigning the appropriate linkage level for the first testlet.

Combined, these provide balance of accessibility and challenge for the student.

Slide 22. The test administrator enters the student's First Contact survey and PNP Profile settings in Kite® Educator Portal.

Slide 23. Educator Portal is the application educators use. It is accessed through a standard web browser. All data, such as the user, enrollment, and roster files, is entered in Educator Portal. Student assessments are personalized in Educator Portal by the settings chosen in the First Contact survey and PNP Profile. This is where test administrators access the Instruction and Assessment Planner used during the optional instructionally embedded assessment window to create

student instructional plans. Later, we will discuss extracts and reports available for monitoring the assessment and receiving assessment results.

Slide 24. The other part of the Kite system used for DLM assessments is called Student Portal. It is the interface where students take testlets. Student Portal can be downloaded on desktops, laptops, iPads, and Chromebooks.

Slide 25. The time needed for each testlet varies depending on each student's unique needs. Most testlets take 5 to 15 minutes to complete.

Slide 26. The DLM alternate assessment allows for flexibility during the testing experience with many allowable practices. These are listed in the ACCESSIBILITY MANUAL and the TEST ADMINISTRATION MANUAL. Practices that are not allowed are also listed in these manuals. These manuals provide direction for teachers and IEP teams to select the many available system supports for each student. These system supports are entered in Educator Portal.

Slide 27. Testing during the spring assessment window is required. Some states do not use the instructionally embedded window, while other states encourage it.

Slide 28. The spring assessment window is required. The window opens for the consortium from mid-March through the first week of June, with states selecting their own window within the consortium dates. Each student completes a unique combination of testlets across multiple Essential Elements. An educator with several students in the same grade may see some similar testlets, but typically students do not receive the same testlets.

Students are assessed on the full science blueprint. The system selects the Essential Elements and assigns the linkage level, and the test administrator cannot override the system assignments.

Slide 29. The DLM alternate assessment is adaptive, adjusting in the linkage level based on how a student performs on each testlet. The system delivers one testlet at a time in each subject. After the student takes the first testlet in a subject area, the system scores the testlet, and then delivers the next appropriate testlet. This adaptive process could take up to 15 minutes.

The second testlet is then assigned based on the additional information gained from the first testlet. The system selects each subsequent testlet based on the student's recent performance on the previous testlet in the subject.

Since each testlet is packaged and delivered separately, the test administrator determines when to schedule each testlet within their state's larger spring assessment window.

Slide 30. The optional instructionally embedded assessment window is the first of the two assessment windows, and it occurs during the fall and winter months. During this window, teachers provide instruction and then may deliver testlets to the students. The testlets are designed to be instructionally relevant. The number of testlets administered during this window can vary. The test administrator chooses the Essential Element to be assessed. The system recommends a linkage level for each Essential Element, but the test administrator can override the recommendation.

Slide 31. Now that you have had an overview of the DLM core beliefs, assessment design, accessibility supports, and test delivery methods, you will learn how you can supervise and manage the assessment. The DLM Consortium provides several extracts and reports for that use. You can read in detail about these resources in the *EDUCATOR PORTAL USER GUIDE*, which also provides step-by-step guidance on how to retrieve them. The next slides provide an overview of the most pertinent reports and extracts for monitoring testing.

Slide 32. Extracts and reports are available through Educator Portal based on user role. Therefore, district-level users have access to district-level reports, building-level users have access to building-level reports, and teachers have access to their student and class reports.

All extracts and reports can be downloaded, saved, and printed as needed. Extracts are in CSV format but can be downloaded and saved as an Excel file if formatting changes are desired. Reports are in PDF format.

Slide 33. First, we will explore the extracts. Select the Reports tab from the menu, then select Data Extracts.

Slide 34. Among the list of extracts that may be of particular help is

- the Current Enrollment extract, which provides enrollment information for active students;
- the DLM Test Administration Monitoring extract, which will be discussed in more detail on the following slide;

- the First Contact Survey File extract, which lists the teacher responses for each question in each student’s First Contact survey;
- the PNP Settings Counts and PNP Settings extracts, which include information about students’ accessibility supports;
- the Roster extract, which shows student assignment to teachers for each subject;
- the Security Agreement Completion extract, which tells whether or not users have completed the security agreement;
- the Training Status extract, which tells whether or not users have completed their training; and
- the Users extract, which lists Educator Portal users and their roles.

Slide 35. The DLM Test Administration Monitoring Extract includes information about test administration during both the optional instructionally embedded assessment window and the required spring assessment window. During the instructionally embedded assessment window, the extract tells the number of testlets planned but not started, in progress, and completed. During the spring assessment window, the extract tells the number of testlets not started, in progress, completed, and required. When the number of testlets completed equals the number of testlets required, the student is finished testing. The extract also indicates if the student completed a field test.

Slide 36. For reports, select the Reports tab from the menu then select Alternate Assessment.

Slide 37. The Monitoring Summary Report under the General Reports tab serves a similar purpose to the DLM Test Administration Monitoring Extract. The report can be filtered by district and school.

Slide 38. Under the Instructionally Embedded tab are Student Progress and Class Roster reports.

Slide 39. The Student Progress report summarizes a student’s progress during the optional instructionally embedded assessment window, but will not display any testlet delivered during the spring assessment window. Test administrators may find the report useful when planning or reviewing instruction for a student. The report displays the grade-level expectation (Essential Element), the linkage levels

for that Essential Element, and if the student demonstrated mastery when assessed at a particular linkage level for an Essential Element.

Slide 40. The Class Roster report is only applicable for the optional instructionally embedded assessment window. The Class Roster report displays the most recent assessment and current instructional goals for one or more students on a roster.

Slide 41. Under the End-of-Year tab are individual, bundled, and summary reports as well as state, district, school, and class aggregate reports. These reports are for the previous school year, and a teacher will only have access to reports for students to whom they are currently rostered.

Slide 42. Student score reports do not become available until the spring window has closed. Each state determines which user roles have permission to view the reports. These are summative reports providing student reports for the year.

Slide 43. The results from the testlets taken ONLY from the spring assessment window are provided in the final end-of-year Individual Student Score Reports. Resources are available on the DLM website about how to understand the score reports and how to explain them to parents and guardians.

Extracts and reports are described in detail along with screen shots and directions for access in the EDUCATOR PORTAL USER GUIDE.

Slide 44. The Aggregate Report summarizes the testing results across the district, school, or class in PDF format. The report provides the number of students tested by grade, subject, and performance level.

The Aggregate Reports are released based on user role. Therefore, district-level users have access to district reports, and building-level users have access to building reports.

Slide 45. Depending on state permissions, users may have the ability to access Individual Student Score Reports from previous years (beginning with 2015-2016). Test administrators will only have access to archived reports for students to which they are currently rostered. If a test administrator wants to view a report for a student to which they were previously rostered, but are not currently, they must contact their assessment coordinator.

Slide 46. Extracts and reports are available to help test administrators and district staff monitor the progress of testing in the district.

Additional extracts are described with screen shots and directions on how to access the resources in the EDUCATOR PORTAL USER GUIDE.

Slide 47. A Parent Interpretive Guide and a Parent Cover Letter for Score Reports are available. In addition, some parents and guardians will be interested to know that they are able to download Student Portal onto a home computer and use the practice activities and released testlets. Educators and families alike may want to know about the other resources available to them as they assist their students.

Slide 48. Educators, parents, and guardians can access additional resources to support student learning on the professional development site, which is facilitated by DLM partners at the University of North Carolina at Chapel Hill. This site includes more than 50 instructional modules. The site also has a variety of instructional resources, including books parents can read with their student, writing tools if a student cannot use a standard pencil or computer keyboard, and communication supports if a student struggles to use speech to communicate. Parents can also join a virtual community of practice to interact with other families and post questions to the DLM professional development team.

Slide 49. For more specific information about testing and the DLM assessment system, see the manuals on your state's DLM webpage.

- The ACCESSIBILITY MANUAL provides guidance on the selection and use of accessibility features.
- The ASSESSMENT COORDINATOR MANUAL supports district and building staff to prepare for and monitor assessments.
- The DATA MANAGEMENT MANUAL supports data managers with managing user, student, and roster data in Educator Portal.
- The EDUCATOR PORTAL USER GUIDE provides guidance and support for users navigating Educator Portal.
- The TECHNOLOGY SPECIFICATIONS MANUAL supports technology personnel in preparing schools for the technology needs of the DLM assessment.
- The TEST ADMINISTRATION MANUAL supports test administrators in preparing themselves and students for the DLM assessment.

Slide 50. The Dynamic Learning Maps alternate assessment is designed for students with the most significant cognitive disabilities to enable them to better demonstrate what they know, understand, and can do academically in relationship to the Essential Elements, which are the standards aligned to the grade-level content standards but at a reduced depth, breadth, and level of complexity. The DLM assessments have accessible content, accessible design, and accessible delivery.

Slide 51. Thank you for viewing the DLM District and Building Administrator Training. If you have further questions, contact the DLM Service Desk at 1-855-277-9751, email [d1m-support@ku.edu](mailto:d1m-support@ku.edu), or visit [dynamiclearningmaps.org](http://dynamiclearningmaps.org).
